- **Steel Frame**
- **No Nails**
- **Designed For Strength**
- **No Screws**
- **Seamless Finish**

THE CREATIVE DECKING SYSTEM >

The Creative Decking system is unique to us. We use a galvanised steel subfloor in conjunction with quality decking timber and a secret fix method. These three features combined create a system that will last a lifetime and increase the value of your home.

Traditionally, timber decks are combined with timber subfloors – people steered away from using steel subfloors with the timber due to their expansion and contraction differentiation, however with our system this problem along with many others are completely eliminated.

CUSTOM DESIGNED AND BUILT JUST FOR YOU >

You can let your ideas run wild because a timber deck can be virtually any shape or size. And your deck can be built with different levels and stairs, even cantilevered over steep slopes. You can add a timber deck under part or all of your covered area. The options are endless and you'll be surprised with the decking design possibilities.

No Screws – No Nails Secret fixings means no nails or screw heads are visible which enhances the smooth lines of the decking boards. Having no nails or screw heads means there is less chance of timber splitting for a seamless finish. What's more it saves time in installation therefore saving you money.

- Secret fix
- No cracking timber
- Easy to strip back in future if ever neglected
- No raised screws or nails
- Longer life
- Low maintenance
- Seamless, smooth finish, enhancing smooth lines and space
- Allows timber and steel subfloor to expand and contract at different rates without issue
- Fast installation

DECKING CHOICE >

There's also a wide range of materials to choose. The sub structure (frame) of your deck can be built using steel floor framing system designed for strength and suited for use with reactive soils.

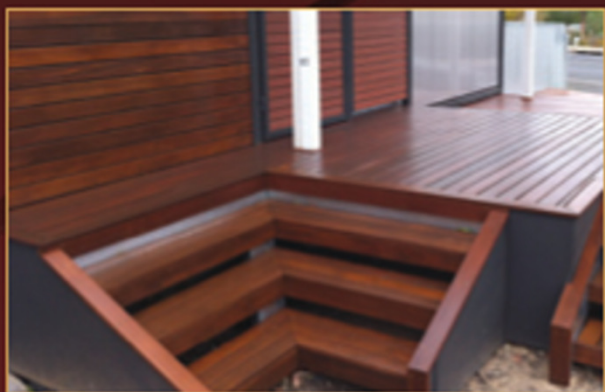

The system is ideal for decking, and suits cladding with a wide range of particleboard, hardwoods and composite products.

(BEFORE) Steel Frame Sub Floor

GALVANISED STEEL SUBFLOOR >

- Strength of steel – less framework
- Termite resistant
- Mould resistant
- Eliminates rot
- Long term protection against corrosion
- Good for use on domestic and light commercial construction
- Easy to install

(AFTER) Jarrah Decking with secret fixings

DECK BORDER OPTIONS >

COMPOSITE TIMBERS >

Another innovative choice of decking boards is made from recycled wood and plastic (wood composite). They look and feel like natural timber, but require none of the maintenance of traditional woods. You will not need to paint or stain our products since they already come in a range of colours and will maintain their beauty for years to come. We can provide you with samples of each choice.

- Looks and feels like natural timber
- Comes in a range of colours
- Termite resistant
- Low maintenance
- No oiling or polishing

QUALITY NATURAL HARDWOODS >

A fantastic range of decking boards are available. Durable and beautiful hardwood Deck boards available in a range of widths 86mm through 135mm.

- Low Maintenance (Oil up to once every 12 months)
- Less expansion and contraction
- Quality oil used during and after installation increases life of deck

- Blackbutt
- Forest Reds
- Jarrah

- Kapur
- Merbau
- River Reds

STAIRS ➤

RAMPS ➤

And it doesn't just end with the deck. Creative Outdoors have a fantastic range of inspiring balustrade options to choose from. It could be stainless steel cables, timber slats or thermoclick (acrylic board).
