LASER CUT  
SCREENING ➤

## LASER CUT SCREENING ➤

For a sensational addition to any carport, patio, or verandah, Creative Outdoors laser cut screens can be fitted to enhance any outdoor area.

Laser Cut metal screening can be used for a variety of purposes and can be manufactured in many shapes including large panels up to 3 metres x 1.2 metres. Often panels are put together to span greater distances to create a stunning effect.

With a large range of pre made or custom designed patterns our powder coated BlueScope Steel Laser Cut Screens can be fixed to structures creating privacy in otherwise open spaces, or to define areas for an intimate feel.

Steel laser cut screens are also the perfect choice for areas that may be unsightly as they can obscure the view with an aesthetically pleasing pattern.

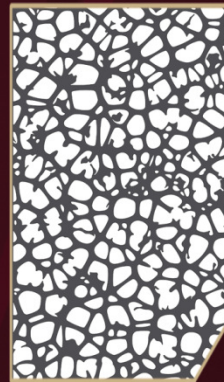

Delivered in a range of colour options we ensure all our laser cut screening options fit your home or business premises to create an original look and feel that will be the envy of your family and friends.

Using laser cut screens has become increasingly popular as they are flexible to be used as barriers, privacy screening and even gate or fence panels - the options are only limited by your imagination.

Utilising our screening and with the creative use of back lighting, our screens can create beautiful filtered lighting effects that can give texture to any surface.

Creating unique outdoor spaces have never been easier, and with the design functionality and flexibility of our laser cut screening, we can achieve a vibrant tailor made feature to suit any outdoor area in Adelaide.
